Subject TRANSMITTAL OF WASTE PROFILES FOR GRANULAR ACTIVATED CARBON  
FROM ROCKY FLATS ENVIRONMENTAL TECHNOLOGY SITE - SLG-001-97

Attached please find for review the waste profile for the spent granular activated carbon (GAC) that we have been discussing as a possible candidate for incineration at WERF. The Waste Profile includes an executive summary, INEEL L-0435 10 - L0435-12 forms, and various attachments supporting the waste profile. The Generator Certifier Signature on form L-0435 12 has not yet been signed by Rocky Flats Waste Certification Organization personnel. In the interest of completing the review and approval process to support a late July update of the INEEL Site Treatment Plan, we are sending the waste profiles in draft form, awaiting final waste certification approval by the Rocky Flats Waste Certification Organization.

As was discussed in our June 18, 1997 meeting, we will be working to complete the INEEL L-0435 14 - L-0435 17 forms by August 9, 1997 to support the shipment to INEEL if the waste stream is approved. In addition, our Waste Management Organization continues to make progress toward the completion of the waste profiles for various non-hazardous, low level radioactive waste oils at RFETS. Incineration of these waste oils in substitution for new will be a significant waste minimization success if achieved.

We look forward to working with you to complete the treatment of this waste. If you have any questions please call me at (303) 966-6588 or Hopi Salomon at (303) 966-6627

Shaun L. Garner

ADMIN RECORD

FILED 6/26/97

**EXECUTIVE SUMMARY WASTE PROFILE**  
**FOR GRANULATED ACTIVATED CARBON**  
**A SUBSET OF PARTICULATE SLUDGE (RF-W071)**

Rocky Flats Environmental Technology Site (RFETS) has generated a granulated activated carbon mixed waste stream from several environmental restoration projects. This waste stream is identified as a subset of Particulate Sludge, Site Treatment Plan number RF-W071. The RFETS Site Treatment Plan, Rebaseline, identifies catalytic chemical oxidation (a process that is currently being de-funded) as the primary treatment option for this waste. This profile is being submitted to INEEL for review and potential approval for processing at the WERF incinerator, as a new, contingency treatment option.

**ANALYTICAL INFORMATION/PROCESS KNOWLEDGE**

This material has been determined to be a mixed waste based on sample results and process knowledge. The waste stream consists of granulated activated carbon (GAC). The GAC originated from several Environmental Restoration based sources. The GAC was used to polish the airstream from low temperature thermal desorption units (TDUs), which were used in processing radioactive soils and debris contaminated with VOCs. Other GAC originated at the Consolidated Water Treatment Facility (CWTF) where it was used as a final organic polishing step on treated wastewater originally generated from various ER activities including condensate from the TDUs described above.

Some of the soil and drums originally treated in the TDUs contained VOCs from listed sources (F001 and F002 - Ryan's Pit Project). Treatment residuals (e.g., GAC) would therefore be considered hazardous via the RCRA derived from rule. In addition, some of the treated soil and drums contained VOCs that did not originate from listed sources (Trenches T-3 and T-4 Project) and were evaluated with respect to their RCRA characteristics. Samples from this GAC exceeded select RCRA TCLP standards (TCE and mercury), and contained slightly elevated levels of uranium, plutonium and americium isotopes. As a result, the spent GAC is classified as mixed waste. Because the GAC greatly exceeds LDR treatment standards for various VOCs (e.g., the PCE LDR level is 6 ppm, a sample of the waste was 7,400 ppm), the waste must be treated prior to disposal. The waste codes that apply to this waste are F001 and F002 (for the spent solvents TCE, PCE and 1,1,1-Trichloroethane from the Ryan's Pit Project) and D040 (TCE) and D009 (mercury) from the Trenches T-3 and T-4 Project. Listed and characteristic waste codes apply for TCE because the GAC contains TCE from both types of sources.

Other VOCs such as Benzene and Toluene were detected in the GAC. These constituents can be associated with RCRA listed hazardous waste codes (e.g., F005). However, these contaminants are suspected to have originated as components of gasoline, and not a solvent process. Therefore, the GAC does not carry listed codes for these types of constituents. Since mercury is a volatile metal, it was sorbed onto the GAC in the same manner as the VOCs during the TDU treatment.

Process knowledge and full suite TCLP results indicate that no other hazardous waste codes apply to this waste stream. A draft Land Disposal Notification and Certification Form is included with this submittal as Attachment 1. Because the GAC came from multiple sources, some of which were not listed or did not exceed a TCLP limit, not all waste codes associated with this profile are on all GAC waste containers. Attachment 2 contains a table which ties waste origination to waste codes, individual waste containers and corresponding sample numbers.

## **GENERAL CHARACTERIZATION APPROACH**

Samples collected in support of this waste profile were collected to represent highest concentrations of contaminants from each of the two GAC sources (the TDU's and the CWTW). Waste removed from the TDUs carbon units were placed into ten, 55 gallon drums and four, 4' x 4' x 7' wooden waste crates. GAC contained in drum D87122 came from one of three parallel carbon units that was used in processing a greater volume of soil and debris than any other carbon unit. This drum was sampled three times to complete the waste profile (samples DB00012RM, DB00015RM, DB00038RM).

Samples of GAC from the CWTW originated from GAC that was removed from the top of the influent side of the GAC unit. This GAC would contain the highest levels of absorbed contaminants. Samples of the CWTW GAC are FT20601RG, FT20604RG, and DB00039RM. Attachment 3 contains a summary table of the GAC analytical results, the Form 1 Analytical Results and the log sheets and chain of custody forms used in the sample collection process.

## **Exceptions to the INEEL RRWAC**

### **RRWAC, Section 4 6 2 1**

Currently RF-W071 has not received treatment approval via the INEEL-Site Treatment Plan (STP) and is therefore not recognized by the Waste Analysis Plan.

### **RRWAC, Section 4 6 2 9**

GAC is packaged as follows:

thirty - 55 gallon drums with 2 plastic liners

four - 4' x 4' x 7' wooden waste crates with 1 cardboard liner, and one plastic inner liner

## **L-0435 Waste Profile Information**

### **L-0435 10 Generators Certification and Information**

#### **Item (6) Rate of Generation**

The rate of generation is listed as ongoing at a 775.5 ft<sup>3</sup>/yr. This section also lists the mass at 24156 lbs. The GAC generation rate of 775.5 ft<sup>3</sup>/yr represents the volume of GAC generated from a number of projects completed in approximately one year. It is anticipated that this waste stream will be generated from similar projects in the future at relatively like rates. Future projects will generate GAC with the same or similar waste codes, suites of contaminants, and at contaminant levels consistent with what is represented by this L-0435 form. As necessary, modifications to the L-0435's or other supporting documentation will be completed to represent future GAC waste streams. Attachment 4 gives the calculations and assumptions used at arriving the stated rate.

### **L-0435 11 Characterization of Material**

#### **Item (2)(d)(1) Heat of Combustion and item (2)(d)(2) Ash Content**

Ash content and BTU content are listed as

Ash Content 5-10%

Heat of Combustion 5,000 - 10,000 BTU/lb

These estimates were given by Jim Sherbondy, Technical Representative for TIGG Corporation (412) 257-8520, an original supplier of the GAC in a telephone conversation with H. Salomon at Rocky Flats (303) 966-6627, on March 31, 1997.

#### **Item (2)(d)(3) Total Halogen Content**

Total halogen content is listed as <15 to 8,479 ppm

The only halogens present in this GAC are expected to be from the chlorinated volatile organic compounds for which samples have been collected and analyzed. These samples evaluated total VOCs in the waste stream. Using these results and the molecular weights of the chlorinated compounds detected, the concentration of the chlorine (the only halogen expected) can be calculated. A copy of the spread sheet used to calculate the chlorine from the total VOC results is included as Attachment 5. These results represent the maximum expected chlorine (halogen) concentration from a biased grab sample (sample # DB00015RMDL).

## **L-0435 12· Radiological Characteristics of Material**

### **Item (i) Other Isotopes Present**

Analytical results used for the quantitation of some isotopes in the GAC are reported as a combination of the isotopes (e.g., Uranium-233/234). Analytical results themselves do not allow for the identification of the specific isotope. In the case of Uranium-233/234 all results reported are attributable to the isotope Uranium-234, and are listed this way in section (i) of the L-0435 12 form. Operations requiring the generation, storage or use of Uranium-233 have not been performed at RFETS. Information regarding the use and storage of this isotope in the DOE system can be found in *Uranium-233 Storage Safety At Department of Energy Facilities*, Defense Nuclear Facilities Safety Board Technical Report, DNFSB/TECH-13, February, 1997.

- Daughter Products were calculated using the computer software *Raddecay Programming and File Structure Information*, Grove Engineering, Inc., October, 1987. Only isotopes calculated to exceed the Section 4.6.2(7) RRWAC criteria of 0.1 pCi/g for alpha or beta emitters or 1 pCi/g for gamma emitters are listed on the form. The isotopes calculated to exceed this criteria are thorium-231 which is in equilibrium with uranium-235, thorium-234 and protactinium-234m which are both in equilibrium with uranium-238. A thirty three year age was assumed as the initial generation of the isotopes, which corresponds to the opening of the first burial trench of which the GAC is a treatment residue from

 Identify ALL US EPA hazardous waste codes that apply to this waste shipment as defined by 40 CFR 261. For each waste code identify the corresponding subcategory or check NONE if the waste code has no subcategory. Spent solvent and California List treatment standards are listed on the back of this form. If F039 multi-source leachate applies those constituents must be listed and attached by the generator. If D001 D002 or D012 D043 requires treatment of the characteristic and meet 268.48 standards then the underlying hazardous constituent(s) present in the waste must be listed and attached

To identify F039 or D001 D002 D012 D043 underlying hazardous constituent(s) use the F039/Underlying Hazardous Constituent Form provided (CWM 2004) and check here   
 If no UHCs are present in the waste upon its initial generation check here   
 To list additional US EPA waste code(s) and subcategory(s) use the supplemental sheet provided (CWM 2005 B) and check here

HOW MUST THE WASTE BE MANAGED? In column 7 above enter the letter (A B1 B2 B3 C D or E) below that describes how the waste must be managed to comply with the land disposal regulations (40 CFR 268.7). Please understand that if you enter the letter B1 B2 B3 or D you are making the appropriate certification as provided below

## A RESTRICTED WASTE REQUIRES TREATMENT

This waste must be treated to the applicable treatment standards set forth in 40 CFR Part 268 Subpart D 268.32 or RCRA Section 3004(d)  
 For Hazardous Debris "This hazardous debris is subject to the alternative treatment standards of 40 CFR Part 268.45"

## B 1 RESTRICTED WASTE TREATED TO PERFORMANCE STANDARDS

I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification and that based on my inquiry of those individuals immediately responsible for obtaining this information I believe that the treatment process has been operated and maintained properly so as to comply with the performance levels specified in 40 CFR part 268 Subpart D and all applicable prohibitions set forth in 40 CFR 268.32 or RCRA Section 3004(d) without impermissible dilution of the prohibited waste. I am aware that there are significant penalties for submitting a false certification including the possibility of fine and imprisonment."

## B 2 RESTRICTED WASTES FOR WHICH THE TREATMENT STANDARD IS EXPRESSED AS A SPECIFIED TECHNOLOGY (AND THE WASTE HAS BEEN TREATED BY THAT TECHNOLOGY)

I certify under penalty of law that the waste has been treated in accordance with the requirements of 40 CFR 268.42. I am aware that there are significant penalties for submitting a false certification including the possibility of fine and imprisonment.

## B 3 GOOD FAITH ANALYTICAL CERTIFICATION - FOR INCINERATED ORGANICS

"I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification and that based on my inquiry of those individuals immediately responsible for obtaining this information I believe that the nonwastewater organic constituents have been treated by incineration in units operated in accordance with 40 CFR Part 264 Subpart O or 40 CFR Part 265 Subpart O or by combustion in fuel substitution units operating in accordance with applicable technical requirements and I have been unable to detect the nonwastewater organic constituents despite having used best good faith efforts to analyze for such constituents. I am aware that there are significant penalties for submitting a false certification including the possibility of fine and imprisonment."

## C RESTRICTED WASTE SUBJECT TO A VARIANCE

This waste is subject to a national capacity variance, a treatability variance or a case by-case extension. Enter the effective date of prohibition in column 7 above  
 For Hazardous Debris "This hazardous debris is subject to the alternative treatment standards of 40 CFR Part 268.45"

## D RESTRICTED WASTE CAN BE LAND DISPOSED WITHOUT FURTHER TREATMENT

I have determined that this waste meets all applicable treatment standards set forth in 40 CFR Part 268 Subpart D and all applicable prohibition levels set forth in Section 268.32 or RCRA Section 3004(d) and therefore can be land disposed without further treatment. A copy of all applicable treatment standards and specified treatment methods is maintained at the treatment storage and disposal facility named above. I certify under penalty of law that I have personally examined and am familiar with the waste through analysis and testing or through knowledge of the waste to support this certification that the waste complies with the treatment standards specified in 40 CFR Part 268 Subpart D and all applicable prohibitions set forth in 40 CFR 268.32 or RCRA section 3004(d). I believe that the information I submitted is true, accurate and complete. I am aware that there are significant penalties for submitting false certification including the possibility of a fine and imprisonment."

## E WASTE IS NOT CURRENTLY SUBJECT TO PART 268 RESTRICTIONS

This waste is a newly identified waste that is not currently subject to any 40 CFR 268 restrictions

I hereby certify that all information submitted in this and all associated documents is complete and accurate to the best of my knowledge and information

Signature Shane L. Hamel

Title Project Manager Date 6-24-97

# LAND DISPOSAL NOTIFICATION AND CERTIFICATION FORM - REVERSE SIDE

## SOLVENT AND CALIFORNIA LIST TREATMENT STANDARDS

If the waste identified on the other side of this form is described by any of the following US EPA hazardous waste codes F001 F002 F003 F004 F005 and all solvent constituents will not be monitored by the treator and/or this hazardous waste is subject to any prohibitions identified as California List restrictions (40 CFR 268 32 and/or RCRA Section 3004(d)) then each constituent MUST be identified below by checking the appropriate box and this page must accompany the shipment along with the opposite side of this form. If the waste code F039 describes this waste then the corresponding list of constituents must be attached. If D001 D002 or D012 D043 require treatment to 268 48 standards then the underlying hazardous constituent(s) must also be attached.

1 All spent solvent treatment standards are measured through a total waste analysis (TCA) unless otherwise noted. Wastewater units are mg/l nonwastewater are mg/kg

<b>CALIFORNIA LIST TREATMENT STANDARDS - 40 CFR 268 32, 40 CFR 268 42 and RCRA Section 3004(d)</b>		
A waste must first be designated as a US EPA Hazardous waste before the waste can be subject to the California List restrictions		
Restricted waste description	Prohibition	Treatment Standard
Liquid or nonliquid wastes containing Halogenated Organic Compounds listed in 40 CFR 268 Appendix III	Liquid wastes Greater than or equal to 1 000 mg/l Nonliquid wastes Greater than or equal to 1 000 mg/kg	40 CFR 268 42(a)(2) – INCIN or FSUBS
Liquid wastes containing PolyChlorinated Biphenyls (PCBs)	Greater than or equal to 50 ppm	40 CFR 268 42(a)(1) – INCIN or FSUBS Also see 40 CFR 761 60 and 70
Liquid wastes containing Metals Note Hazardous wastes containing As Cd Cr Hg Pb or Se must also be evaluated if not characteristically hazardous for that metal	One or more of the following metals (or elements) at a concentration greater than or equal to the following Nickel and/or compounds as Ni 134 mg/l Thallium and/or compounds as Th 130 mg/l	RCRA Section 3004(d)

CWM 2005A (12/94)

For the definition of "liquid" refer to Method 9095 the Paint Filter Liquids Test from EPA manual SW 846

B Ignitable characteristic wastes except for the 40 CFR 261 21(a)(1) High TOC subcategory that are managed in CWA CWA equivalent or Class I SDWA systems

C High TOC ignitable characteristic liquids subcategory based on 40 CFR 261 21(a)(1) Greater than or equal to 10% total organic carbon

D002

D Corrosive characteristic wastes that are managed in non CWA/non CWA equivalent/non Class I SDWA systems

E Corrosive characteristic wastes that are managed in CWA CWA equivalent or Class I SDWA systems

## UNDERLYING HAZARDOUS CONSTITUENT FORM (UTS)

Generator Name U S Dept of Energy/Rocky Flats ETS Manifest Doc No \_\_\_\_\_  
 Waste ID No : RF-W071 (Spent Granulated Activated Carbon) State Manifest No. N A

If D001, D002, D003 or D012-D043 requires treatment to 268 48 standards, then each underlying hazardous constituent present in the waste at the point of generation, and at a level above the UTS constituent specific treatment standard, must be listed. Write the letter (A, B1, B3, or C which corresponds to the letter on the Land Disposal Notification and Certification Form (UTS)) beside each constituent present to properly describe how the constituent(s) must be managed under 40 CFR 268 7

## Notes to table

<sup>a</sup>Concentration standards for wastewater are expressed in mg/l are based on analysis of composite samples.

Except for Metals (SP or TCLP) and Cyanides (Total and Amenable) the nonwastewater treatment standards expressed as a concentration were established (1,12 part, based upon incineration in units operated in accordance with the technical requirements of 40 CFR part 264, subpart O or 40 CFR part 265, subpart O, or based upon combustion in fuel substitution units operating in accordance with applicable technical requirements. A facility may comply with these treatment standards according to provisions in 40 CFR 268 40(d). All concentration standards for nonwastewaters are based on analysis of grab samples.

<sup>b</sup>Both Cyanides (Total) and Cyanides (Amenable) for nonwastewaters are to be analyzed using Method 9010 or 9012, found in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" EPA Publication SW-846, as incorporated by reference in 40 CFR 260.11, with a sample size of 10 grams and a dissolution time of one hour and 15 minutes.

**Table A2-1 Tie Between Waste Origination, Waste Codes, Individual Waste Containers and Corresponding Sample Numbers for Granulated Activated Carbon (GAC) Proposed for Incineration at INEEL WERF**  
**June 25, 1997 (4 02PM)**

Debris Type	Regulatory Classification	Packaging	NRWOL / Container numbers	Interim Storage	Expected Disposition	Sampling Analysis/Media	Approx Volume (yd <sup>3</sup> )
radioactive GAC - T-3/T-4	Mixed Waste D009, D040	4 waste crates and 10, 55-gal drums	12524-8/ P02172, P02173, P02174, P02175, D87113, D87117, D87118, D87119, D87121, D87122, D87126, D87128, D87130, D87132	Unit 13, and 15a	Incineration at INEL's WERF, ash disposal at Envirocare	DB00012RM TCLP (full suite), reactive sulfide, reactive cyanide, DB00015RM VOA screen, DB00038RM Isotopic alpha, sulfur, total metals	15
radioactive GAC - Ryan's Pit & T 3/T-4	Mixed Waste F001/F002 (derived from rule) D009, D040	3 waste crates	NRWOL T0083928/ P02176, P02243, P02245	Unit 13	Incineration at INEL's WERF, ash disposal at Envirocare	Same as above	7
radioactive GAC - Building 891 (CWTF)	Mixed Waste F001/F002 (derived from rule)	20, 55-gal drums	T0089808-1/ D87311, D87384, D87308, D87307, D87306, D87305, D87127, D87385, D87304, D87382, D87388, D87387, D87389, D87310, D87386, D87383, D87302, D87303, D87309, D87712	Unit 1804	Incineration at INEL's WERF, ash disposal at Envirocare	Sample FT20601RG total VOAs, total metals, isotopic alpha Sample FT20604RG TCLP VOAs, TCLP metals, reactive sulfide, reactive cyanide, pH, DB00039RM sulfur	5

**Table A3-1 Summary Results of GAC Samples**

**June 25, 1997 (2:50PM)**

Sample Number	Sample Date	Analyses	Media	Results	Comments

## Comments comments on Sample # DB00012RM

Sample DB00012RM was collected to meet the analytical requirements to determine if the spent T-3/T-4 GAC can be classified as non-hazardous, and be eventually shipped to Envirocare of Utah, Inc., for commercial disposal as LLW. The sample was collected by Randy Scott of M-H in Kevlar B PPE from drum # D87122 which is spent GAC from System I of the M-H TDU System. This GAC was used for the entire project in the System I Carbon bed and recently transferred to a waste drum. When opened, an FID was placed into the drum and VOCs were measured >1000 ppm. System I GAC was chosen because both the RMR Supervisor (Treatment) Mark Wood, and the M-H project Supervisor, Ben Hill, have confidence that System I GAC, because of its use through out the project, would have the greatest probability for being classified as a hazardous waste. Therefore, this sample is expected to represent a worst case scenario. The sample was collected directly from the drum to the sample jar, (no sampling equipment used).

Verification of statement above: Mark R Wood uses TDU F.I.D. Supervisor

## INTEROFFICE MEMORANDUM

**DATE** February 20, 1997

**TO** M K Pepping, Operations, T893B, X3075

**FROM** J R Cinillo, Water Treatment and Management, T891B X5876

**SUBJECT** CHARACTERIZATION OF SPENT GRANULAR ACTIVATED CARBON AND ION EXCHANGE RESIN - JRC-006-97

**Action** Ensure proper characterization

Recently five drums of Ion Exchange (IX) resin and 20 drums of Granular Activated Carbon (GAC) were generated under the treatment activities at the Building 891 treatment facility. A review of these wastes is necessary to ensure proper characterization, handling, storage and disposal. Both standard analysis and TCLP sampling were performed for anticipated constituents.

Samples were taken for radioactive constituents on both the ion exchange and granular activated carbon. The carbon exhibited low levels of radioactive elements above "background" levels and qualifies as a low level waste per radiological engineering written guidance. The ion exchange resin is designed to remove uranium contamination which was confirmed with sample results of ~500 pCi/g total uranium. This waste also qualifies as a low level waste.

Both the ion exchange resin and the granular activated carbon were used to treat F-listed, contained-in wastes. Therefore, the carbon and IX resin would also be considered hazardous waste unless a reasonable argument could be presented that all of the F listed constituents had been removed prior to contact with the IX treatment media. In this case, this type of positive proof can not be established and the wastes will therefore remain listed hazardous wastes.

The results that were received on the ion exchange resin indicate that it meets LDRs, i.e., it is not prohibited from land disposal. However, the granular activated carbon analysis indicates that the waste does not meet the land disposal treatment standard of 6.0 ppm for tetrachloroethene. The result of 24 ppm tetrachloroethene is well above the standard. Therefore, the granular activated carbon is subject to the prohibition on land disposal and will either have to be treated before disposal or handled in an alternative fashion (i.e., regeneration, incineration etc.)

Please feel free to contact me if you have any questions.

## ENGINEERING/SCIENTIFIC NOTE PAD

 <p><b>RMRS</b> Rocky Mountain Remediation Services LLC protecting the environment</p>	SUBJECT	GAC MASS/VOLUME CALCULATIONS	Sheet 1 of 1
	Project No	GAC Disposal	Prepared By Hopi Salomon
	Client	DOE-RFETS	Reviewed By
			Date 6/23/97
From C3/T4, Ryan Pt, 891 (CWTF)			
Inventory: 7, full waste crates (4'x4'x7') 30, 55 gal drums			
Mike Pepping (generator) notes to Hopi Salomon on 6/23/97 that the waste crates are approximately 75% full and the drums are ~ 85% full			
$7 \times 4' \times 4' \times 7' \times 0.75 = 588 \text{ ft}^3$ $30 \times 55 \text{ gal} \times \frac{\text{ft}^3}{748.51} \times 0.85 = 187.5 \text{ ft}^3$ <p style="text-align: right;">Assume 775 <math>\text{ft}^3/\text{yr}</math></p>			
Bulk density's given from MSDS are 0.25 - 0.6 g/cc			
Per Scott Roessners suggestion on 6/18/97 (meeting @ INEEL) suggest using 0.5 g/cc average bulk density.			
Therefore MASS			
$775.5 \text{ ft}^3 \times \frac{0.5 \text{ g}}{\text{cm}^3} \times \frac{354 \text{ cm}}{1 \text{ in}} \times 2.54 \times 2.54 \times \frac{12 \text{ in}}{\text{ft}} \times 12 \times 12 =$ $10979857 \text{ grams} = 10980 \text{ kg}$ $10980 \text{ kg} \times \frac{2.2 \text{ lbs}}{1 \text{ kg}} = 24156 \text{ lbs}$			

The GAC from T3/T4 and Ryan's Pit source removals should contain chlorine from only one source, the chlorinated VOCs that were adsorbed on it as part of the polishing efforts in the thermal desorption treatment process. Chlorine concentration was calculated from total VOC data (sample # DB00015RM-DL). This sample represented what was assumed to be the highest VOC containing GAC (GAC that was in the system the longest (the entire treatment operation)). This data may assist if the GAC is to be incinerated.

Signed

Hopi Salmon

% BY WEIGHT: 100%  
ORAL LD<sub>50</sub>: >10g/Kg (RAT)  
TLV:  
ACGIH: N/A  
OSHA: N/A  
OTHER: N/A

CAUTION! WET ACTIVATED CARBON REMOVES OXYGEN FROM AIR CAUSING A SEVERE HAZARD TO WORKERS INSIDE CARBON VESSELS AND ENCLOSED OR CONFINED SPACES. BEFORE ENTERING SUCH AN AREA, SAMPLING AND WORK PROCEDURES FOR LOW OXYGEN LEVELS SHOULD BE TAKEN TO ENSURE AMPLE OXYGEN AVAILABILITY, OBSERVING ALL LOCAL, STATE, AND FEDERAL REGULATIONS.

### SECTION 3 PHYSICAL DATA

BOILING POINT (°F): N/A  
VAPOR PRESSURE (mmHg): N/A  
VAPOR DENSITY (AIR = 1): N/A  
SOLUBILITY IN WATER: INSOLUBLE  
SPECIFIC GRAVITY (H<sub>2</sub>O = 1): 1.8 2.1  
PERCENT VOLATILE BY VOLUME (%): 0  
pH: 5-8.0  
PACKING DENSITY: 0.4-0.5 g/cc  
APPEARANCE AND ODOR: BLACK PARTICULATE SOLID

### SECTION 4 FIRE AND EXPLOSION HAZARD DATA

FLASH POINT: 400 °C ASTM (DRY VIRGIN STATE)

FLAMMABLE LIMITS:

LEL: N/A  
UEL: N/A

EXTINQUISHING MEDIA: FLOOD WITH WATER. IF WATER IS UNAVAILABLE, NITROGEN OR FOAM MAY BE USED TO BLANKET THE ADSORBENT BED. IF THE MATERIAL IS IN A CLOSED VESSEL, A BOTTOM INLET MAY BE BLOCKED TO DEPRIVE THE FIRE OF OXYGEN BUT THE VESSEL SHOULD REMAIN VENTED FOR RELEASING STEAM OR OTHER HOT GASES.

SPECIAL FIRE FIGHTING PROCEDURES: WEAR PROTECTIVE CLOTHING. SELF CONTAINED BREATHING APPARATUS IF NECESSARY.

UNUSUAL FIRE AND EXPLOSION HAZARDS: FLOODING THE VESSEL WITH WATER WILL EXTINGUISH ANY HOT ZONES. COPIOUS VOLUMES OF STEAM MAY BE GENERATED IN THE PROCESS OF EXTINGUISHING THE HOT ZONES. STEAM GENERATION IS REDUCED WHEN FLOODING OCCURS FROM THE BOTTOM UP AS OPPOSED TO A SPRAY FROM ABOVE. THE CARBON ITSELF MAY NOT EXHIBIT FLAMING ALTHOUGH ANY COMBUSTIBLE MATERIAL IN CONTACT WITH IT WILL. AT TEMPERATURES AROUND 900 °C, CARBON CAN REACT WITH FIRE-FIGHTING MATERIALS SUCH AS WATER OR CARBON DIOXIDE TO FORM HYDROGEN AND/OR CARBON MONOXIDE WHICH COULD REACH LEVELS HAZARDOUS TO RESPIRATION OR REPRESENTING A COMBUSTIBLE OFF-GAS.

### SECTION 5 HEALTH HAZARD DATA

EFFECT OF OVER EXPOSURE:

A. ACUTE

1. INGESTION:  
THE PRODUCT IS NON TOXIC THROUGH INGESTION. THE ACUTE ORAL LD<sub>50</sub> (RAT) IS >10g/Kg
2. INHALATION:  
THE ACUTE INHALATION LC<sub>50</sub> (RAT) IS >644 MG/L (NOMINAL CONCENTRATION) FOR ACTIVATED CARBON

## MATERIAL SAFETY DATA SHEET

### SECTION I

		Product Name	ACTIVATED CARBON, CC SERIES, KG SERIES, KP SERIES	
Manufacturer	WESTATES CARBON, INC	MSDS Number*	100	
	2130 Leo Avenue	CAS Number*	CAS 7440-44-0	
	Los Angeles, California 90040-1634	Date Prepared	NOVEMBER 28, 1993	
Phone Number (For Information)	(213) 722-7500	Prepared By*	MARGARET JEFFERSON	
Emergency Phone Number	(800) 659-1771	Note	Blank spaces are not permitted. If any item is not applicable, or no information is available, the space must be marked to indicate that.	

### SECTION II - MATERIAL IDENTIFICATION AND INFORMATION

COMPONENTS - Chemical Name & Common Names (Hazardous Components 1% or greater; Carcinogens 0.1% or greater)	%*	OSHA PEL	ACGIH TLV	OTHER LIMITS RECOMMENDED
ACTIVATED CARBON	100%	2.5 mg/m <sup>3</sup>	1.5 mg/m <sup>3</sup>	NONE
NON-HAZARDOUS INGREDIENTS				
TOTAL	100			

### SECTION III - PHYSICAL/CHEMICAL CHARACTERISTICS

BOILING POINT	not applicable	SPECIFIC GRAVITY (H <sub>2</sub> O = 1)	0.25 - 0.60 g/cc
VAPOR PRESSURE (mm HG AND TEMPERATURE)	zero	MELTING POINT	not applicable
VAPOR DENSITY (AIR = 1)	not applicable	EVAPORATION RATE (	= 1)
SOLUBILITY IN WATER	Insoluble in water and solvents	WATER REACTIVE	non-reactive
APPEARANCE AND ODOR	Black granules without taste or odor		

### SECTION IV - FIRE AND EXPLOSION HAZARD DATA

FLASH POINT AND METHOD USED	N/A	Auto-Ignition Temperature	> 450°C ANSI/ASTM D 3468	Flammability Limits in Air % by Volume	N/A	LEL N/A	UEL N/A
EXTINGUISHER MEDIA	Water (fog or fine spray), carbon dioxide						
CIAL FIRE FIGHTING PROCEDURES	Avoid procedures that may stir up dust clouds						
UAL FIRE AND EXPLOSION HAZARDS	Avoid contact with strong oxidizers, airborne dust may be a weak explosion hazard						

\* OPTIONAL

# MATERIAL SAFETY DATA SHEET

CC SERIES, KG SERIES, KP SERIES

## SECTION V - REACTIVITY HAZARD DATA

STABILITY	<input checked="" type="checkbox"/> Stable <input type="checkbox"/> Unstable	CONDITIONS TO AVOID	Contact with strong oxidizers
INCOMPATIBILITY (MATERIALS TO AVOID)	Strong oxidizing agents	HAZARDOUS DECOMPOSITION PRODUCTS.	
HAZARDOUS POLYMERIZATION	<input type="checkbox"/> May Occur <input checked="" type="checkbox"/> Will Not Occur	CONDITIONS TO AVOID	not applicable

## SECTION VI - HEALTH HAZARD DATA

PRIMARY ROUTES	<input checked="" type="checkbox"/> Inhalation <input type="checkbox"/> Ingestion	CARCINOGEN LISTED IN	<input type="checkbox"/> NTP <input type="checkbox"/> OSSA <input type="checkbox"/> IARC Monograph <input checked="" type="checkbox"/> Not Listed
HEALTH HAZARDS	LD50 VALUES	not available	ACUTE      CHRONIC
EMERGENCY FIRST AID PROCEDURES			Seek medical assistance for further treatment observation and support, if necessary
EYE CONTACT			Immediately flush with copious amounts of water If redness, itching or a burning sensation develops, have eyes examined and treated by medical personnel.
SKIN CONTACT			Wash material off the skin with soap and water If redness, itching or a burning sensation develops, get medical attention
INHALATION			Remove victim to fresh air If cough or other respiratory symptoms develop, consult medical personnel
INGESTION			Give one or two glasses of water to drink If gastrointestinal symptoms develop, consult medical personnel (Never give anything by mouth to an unconscious person)

## SECTION VII CONTROL AND PROTECTIVE MEASURES

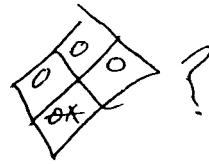

SPIRATORY PROTECTION (SPECIFY TYPE)	Use MSA-NIOSH approved respirator for respirable dusts mists and fumes
PROTECTIVE GLOVES	Rubber latex
EYE PROTECTION	Safety glasses with side shields Contact lenses should not be worn when working with carbon
VENTILATION TO BE USED	<input checked="" type="checkbox"/> Local Exhaust <input type="checkbox"/> Mechanical (general) <input type="checkbox"/> Special <input type="checkbox"/> Other (specify)
OTHER PROTECTIVE CLOTHING AND EQUIPMENT	NONE
HYGIENIC WORK PRACTICES	Wash contacted skin areas after handling

## SECTION VIII - PRECAUTIONS FOR SAFE HANDLING AND USE/LEAK PROCEDURES

STEPS TO BE TAKEN IF MATERIAL IS SPILLED OR RELEASED	Wear respiratory protection during clean up Sweep up and recover or mix material with moist absorbent for dust control and pick up and shovel into waste container Use detergent in spill area after clean up and flush with plenty of water
WASTE DISPOSAL METHODS	Dispose of virgin (unused) carbon (waste or spillage) per local regulations
PRECAUTIONS TO BE TAKEN IN HANDLING AND STORAGE	Activated carbon can be safely stored in any normal storage area, but away from direct heat
OTHER PRECAUTIONS AND OR SPECIAL HAZARDS	An oxygen deficiency may be created when activated carbon is stored in an enclosed space/silo Ventilate or wear self-contained breathing apparatus Follow all procedures for confined space entry

## **MATERIAL SAFETY DATA SHEET**

## RADSORB

## **SECTION 1 - IDENTIFICATION**

**MANUFACTURER'S NAME** ENVIRONMENTAL SCIENTIFIC, INC  
**ADDRESS** 5400 SOUTH MIAMI BLVD

**EMERGENCY PHONE NUMBER**      **FOR TRANSPORTATION EMERGENCY**  
Call 919-941-0847

PHONE NUMBER 919-941-0847  
EFFECTIVE DATE 3-30-94  
CHEMICAL FAMILY Polyacrylate/polyacrylamide crosslinker

TRADE NAME	RADSORB
DOT CLASSIFICATION	Not applicable
DOT HAZARD CLASS	Not applicable

**SECTION 2 - HAZARDOUS INGREDIENTS**

HAZARDOUS COMPONENTS	HAZARDOUS %	TLV (Units)
one	0.0%	None

### **SECTION 3 - PHYSICAL DATA**

VOLATILITY (%)	None
SOLUBILITY IN WATER	Insoluble but swellable in aqueous fluids
pH VALUE	6.5 +/- 1.0
PHYSICAL FORM	Granular solid
PARTICLE SIZE	200 +/- 100 $\mu$
MOISTURE CONTENT	<5%
BULK DENSITY	40 +/- 5 lbs/ft <sup>3</sup>

## **SECTION 4 - FIRE AND EXPLOSION HAZARD DATA**

**FLASH POINT** Not applicable  
**EXTINGUISH MEDIA** Water CO<sub>2</sub>, foam dry powder  
**UNUSUAL FIRE AND FIRE HAZARD** None

## **SECTION 5 - HEALTH EFFECTS INFORMATION**

<b>SKIN CONTACT</b>	Prolonged contact may cause slight irritation due to the somewhat abrasive powder
<b>EYE CONTACT</b>	May cause slight irritation and swelling of mucous membrane
<b>HALATION</b>	May cause irritation to the respiratory tract and lungs

## RADSORB MSDS continued

### FIRST AID

SKIN CONTACT Wash with soap and water  
EYE CONTACT Rinse with plenty of water for at least 15 minutes If discomfort continues seek medical attention  
INHALATION Remove to fresh air If discomfort continues, seek medical attention  
INGESTION If discomfort continues seek medical attention

### SECTION 6 - REACTIVITY INFORMATION

#### STABILITY

Stable

#### INCOMPATIBILITY

Strong oxidants e.g. sodium hypochlorite alkalies and acids

#### HAZARDOUS POLYMERIZATION

Will not occur

#### CONDITIONS TO AVOID

Keep from getting damp or wet until ready to use

#### THERMAL DECOMPOSITION PRODUCTS

In the event of combustion CO CO<sub>2</sub>, NO<sub>x</sub> may be formed

Do not breathe smoke or fumes Wear suitable protective equipment

### SECTION 7 - PERSONAL PROTECTION EQUIPMENT

#### RESPIRATORY PROTECTION

Not required under normal use conditions If significant dusting occurs wear NIOSH approved dust respirator

#### VENTILATION

If significant dusting occurs local exhaust ventilation is recommended

#### OTHER PROTECTION

No special precautions Avoid eye and skin contact and inhalation of dust

### SECTION 8 - SPILL AND DISPOSAL

#### SPILL CONTROL AND RECOVERY

#### SOLID SPILLS

Sweep up and place in reclaim or disposal container Wear protective equipment specified in Section 7

#### DISPOSAL

Radsorb is not a hazardous waste as defined under the Resource Conservation and Recovery Act (RCRA) 40 CFR 261 it does not have characteristics of Subpart C and it is not listed under Subpart D Radsorb is a non-hazardous solid waste and can be disposed of by incineration or in a sanitary landfill in accordance with local state and federal regulations

### SECTION 9 - TRANSPORTATION INFORMATION

#### DOT SHIPPING NAME/HAZARD CODE

Radsorb is not regulated during transportation

## **RADSORB MSDS continued**

### **SECTION 10 - REGULATORY INFORMATION**

<b>TOSCA</b>	Radsorb does not contain ingredients (at a level of 1% or greater) on the List of Toxic Chemicals
<b>FEDERAL WATER POLLUTION CONTROL ACT, CLEAN WATER ACT 40 CFR 401 15</b>	Radsorb does not contain ingredients specifically listed
<b>CLEAN AIR ACT, 40 CFR 60 SECTION 111 40 CFR 61, SECTION 112 Act</b>	Radsorb does not contain ingredients covered by the Clean Air Act
<b>CALIFORNIA PROPOSITION 65</b>	Radsorb does not contain chemicals on the current Proposition 65 list
<b>MICHIGAN CRITICAL MATERIALS</b>	Radsorb does not contain ingredients listed on the Michigan Critical Materials Register

### **SECTION 11 - USER'S RESPONSIBILITY**

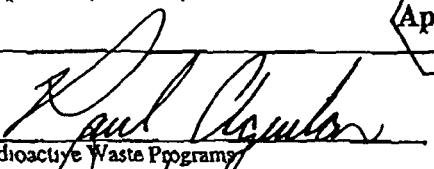

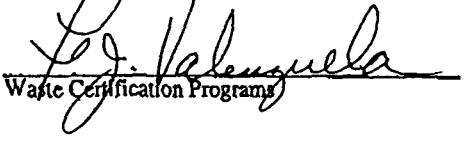

This Radsorb material safety data sheet provides health and safety information. Radsorb is to be used in applications consistent with our product literature. Individuals handling Radsorb should be informed of the recommended safety precautions and should have access to this information. For any other uses, exposures should be evaluated so that appropriate handling practices and training programs can be established to ensure safe workplace operations. Please consult your ESI sales representative for further information.

### **SECTION 12 - STORAGE**

<b>STORAGE</b>	Keep material in a dry location and sealed to minimize water absorption before use
----------------	------------------------------------------------------------------------------------

## RADIOACTIVE WASTE VARIANCE REQUEST

RWVR No. 96-04

Section 1 (To be completed by the Initiator)	Hopi Salomon Initiator Name	NA Employee Number	T893B Building	Accelerated Actions Department	6627/5129 Phone/Page	9/13/96 Date
	Description of Variance (include specific requirements for which variance is being requested)  Package granulated activated carbon (gac) which has been used on the T3/T4 project and is now spent. The waste contains D coded organics, some F-listed components (from Ryan's Pit remediation) and small amounts ( $\sim 60 \mu\text{Ci/g}$ ) $\text{U}^{238}$ . We request that the waste be able to be packaged in 4'x4'x7' wooden waste crates for which we need a variance from <del>W0-1101</del> WO - 1101 (which requires white 55 gal drums).					
	Justification for Variance (describe why variance is being requested and any action to be taken)  Per. Joe Molter, (RWRS) Doug Parker (DynCorp Traffic), Ken Lenarock (DynCorp traffic) these 4x4x7' waste crates are appropriate shipping containers for spent GAC. Also, these containers take up less space when being stored, and are more appropriate than drums for bulk storage					
	Scope of Variance (describe the extent to which the variance is applicable - i.e., time frame, affected drum numbers).  The spent GAC has already been loaded, but will not be sealed up until this variance is approved. The waste is currently in the following waste crates: P02172, P02173, P02174, P02175, P02176, P02177, P02243, P02245, and the following drums. D87118, D87113, D87117, D87119, D87121, D87122, D87126, D87128, D87130, D87132. The waste crates will be evaluated for VOC emissions after they are sealed in accordance with 40 CFR 60 Appendix A, Method 21, "Determination of volatile organic compound levels". This waste is expected to be incinerated at INEL WERF or Oak Ridge incinerator.					
After completion of Section 1, submit form to Radioactive Waste Programs, Building T130C.						
Section 2	Variance Disposition (circle one)			<input checked="" type="checkbox"/> Approve	Reject	
	Approvals			 Paul R. Parker Radioactive Waste Programs		
 J. Valencia Waste Certification Programs						
Comments  Place copy of this variance with W/RT documentation for all affected containers/packages 						

Survey of Waste Crates 9-23-96 ~ 13<sup>hrs</sup> 1530. Peggy Schreckengast, Health + Safety Supervisor, T3/T4 Project  
Instrument - Photo ionization detector equipped with an 117 eV lamp, which will detect all suspect VOCs. It is calibrated with 100 ppm isobutylene. It detects down to 0.1 ppm. Response factors for the compounds of concern range from 1/10 to 2x the reading. Instrument ranges 0.1 - 2000 ppm. Sample probe =  $\frac{1}{4}$  inch internal diameter. Instrument response time is less than 30 seconds (approximately 10 seconds).

Instrument was calibrated this morning by Wade Russell, RTG. On a 100 ppm isobutylene standard, the instrument read 104 ppm.

Survey performed in accordance with 40 CFR, Part 60, App A, Method 21

Waste Crates	Reading
P02172	0 ppm above background at all wood joints
P02173	
P02175	
P02174	

4x4x7 Waste Crates - sealed, banded containing spent GAC with high VOC levels

9-24-96 Fred Kirschner monitored the following crates on 9-24-96. The same instrument was used, and was calibrated as detailed above.

P0 2245

P0 2243

P0 2176
